GET RID OF STUBBORN FAT WITH ACCENT ULTRA

You have achieved your ideal body weight through proper diet and exercise but you still can't get rid of your muffin top, love handles and flabby arms. You are left feeling frustrated because those stubborn areas stay the same no matter what.

But now you can improve those problem areas with the latest breakthrough technology in fat cell destruction – the **Accent Ultra**.

Dr. R.S. Dharan says, "The **Accent Ultra** is a non-surgical lipolysis treatment that focuses on selective and 'cold' ultrasound for fat cell destruction. This treatment removes fat non-invasively, tightens the skin and improves body contour. It is the first real alternative to surgical procedures."

With state-of-the-art technology from Alma Lasers Ltd., the **Accent Ultra** boasts features that surpass other technologies.

"In some treatments, gas micro-bubbles are created inside tissues in the form of heat and mechanical shock due to its high power waves," says Dr. Dharan. "The heat generated does not only destroy fat cells, but also destroys the surrounding tissues and structures, exposing sensitive skin to the risk of burns."

He adds, "**Accent Ultra** on the other hand, uses a resonance vibration technique that does not damage surrounding tissues such as connective tissue, nerves and blood vessels, because the treatment selectively provokes the immediate and gradual breakup of fat cell membranes.

"The fat layers will continuously collapse and compact in seven to 14 days after the treatment."

According to Dr. Dharan, patients can expect a painless treatment session with the **Accent Ultra** due to its safe and effective technique that requires no anaesthesia and no injections. Dr. Dharan adds that he has been receiving nothing but positive feedback from his patients since introducing the **Accent Ultra** at his clinic.

"Almost all of my patients are happy with

the results after about five treatment sessions when they see a four to six centimetre reduction in their problem areas," he states.

For optimum results, Dr. Dharan advises his patients to go undergo an **Accent Ultra** treatment once every two weeks, and to lead a healthy lifestyle with proper diet and exercise.

There are no side effects and no downtime after each **Accent Ultra** treatment; each treatment lasts an average of 60 to 90 minutes and requires no aftercare.

Patients can even have the treatment during their lunch break and return to work immediately after, says Dr. Dharan who adds that the ideal **Accent Ultra** patient is someone with a normal Body Mass Index (BMI) with areas of stubborn fat despite dieting and exercise.

The **Accent Ultra** combines two technologies – the Ultra module and the UniForm module. The Ultra module combines two

Dr. R.S. Dharan says that the **Accent ultra** removes fat non-invasively.

ultrasound modes – "cold" mode shear waves that targets fat cells and "hot" mode compression waves that thermally enhances the process. This module targets localised fat deposits and reduces body circumference for successfully body contouring.

The UniForm module on the other hand, uses radiofrequency UniPolar technology in parallel with a mechanical lymphatic drainage technology. This module is for reducing cellulite and inducing skin tightening.

Accent Ultra is manufactured by Alma Lasers Ltd. which is a global developer, manufacturer and provider of laser, light-based, radio frequency and ultrasound devices for aesthetic and medical applications.

The treatment is available an average cost of RM5000 for five treatments. For more information or to make an appointment for consultation with a doctor, please contact: Ms. Priscilla Alfred at (+6019) 382 1616.
