

THE PIXEL Q SWITCH

Alma Lasers' new non-invasive laser treatment specializes in softening fine lines and wrinkles as well as tightening sagging skin on the face and neck without pain or downtime.

"It's a fractional non-ablative laser," explains Park Avenue dermatologist and researcher, Dr. Macrene Alexiades-Armenakas. "These microscopic beams allow you to increase the power for better results without wounding the skin. You don't compromise safety and we get amazing results."

It allows us to create some collagen and skin tightening."

The Pixel Q Switch laser is especially good at erasing wrinkles around the mouth, particularly right above the upper lip. "That's an area that's been resistant to treatment," says Alexiades-Armenakas. Another good target zone for this treatment: loose, crepey skin around the neck.

Most people need three treatments spaced about a month apart.

Price: \$400 per treatment.

TO PAY-D

A Brooklyn federal jury yesterday convicted ex-state Sen. Pedro Espada Jr. of looting his tax-funded health clinic of nearly \$500,000. Espada, here after the verdict, quickly lost his infamous smirk.
